

Spring PetClinic - Elastic BeanStalk Java8 Platform

Clone PetClinic Sample Project

```
git clone https://github.com/spring-projects/spring-petclinic.git
```

Configure the application server port

By default, Spring Boot applications will listen on port 8080. Elastic Beanstalk assumes that the application will listen on port 5000.

Open the file `application.properties` in `spring-petclinic/src/main/resources` and the following line at the bottom of the file.

```
server.port=5000
```

Build the project using Maven

```
cd spring-petclinic
./mvnw package
```

The initial build should five to ten minutes to complete. After Maven finishes building the application, the JAR will be located in: `/spring-petclinic/target/`

Create new Elastic BeanStalk Enviornment and Launch Application

Select web server enviornment

Elastic Beanstalk > Create environment

Select environment tier

Amazon Elastic Beanstalk has two types of environment tiers to support different types of web applications. Web servers are standard applications that listen for and then process HTTP requests, typically over port 80. Workers are specialized applications that have a background processing task that listens for messages on an Amazon SQS queue. Worker applications post those messages to your application by using HTTP.

☒ **Web server environment**
Run a website, web application, or web API that serves HTTP requests.
[Learn more](#)

☐ **Worker environment**
Run a worker application that processes long-running workloads on demand or performs tasks on a schedule.
[Learn more](#)

Cancel **Select**

Assign an Application and Environment name. Leave other fields as default

Elastic Beanstalk > Create environment

Create a web server environment

Launch an environment with a sample application or your own code. By creating an environment, you allow Amazon Elastic Beanstalk to manage Amazon Web Services resources and permissions on your behalf. [Learn more](#)

Application information

Application name

Up to 100 Unicode characters, not including forward slash (/).

► Application tags (optional)

Environment information

Choose the name, subdomain, and description for your environment. These cannot be changed later.

Environment name

Domain
 .us-east-2.elasticbeanstalk.

Under Platform settings, select Java, Corretto 8 running on 64bit Amazon Linux 2

Platform

☒ **Managed platform**
Platforms published and maintained by Amazon Elastic Beanstalk. [Learn more](#)

☐ **Custom platform**
Platforms created and owned by you.

Platform

Java

Platform branch

Corretto 8 running on 64bit Amazon Linux 2

Platform version

3.2.4 (Recommended)

In Application code, select Upload your code. Upload the application JAR file and click Create environment

Application code

☐ **Sample application**
Get started right away with sample code.

☐ **Existing version**
Application versions that you have uploaded for **spring-petclinic**.

-- Choose a version --

☒ **Upload your code**
Upload a source bundle from your computer or copy one from Amazon S3.

Version label
Unique name for this version of your application code.

spring-petclinic-source

Source code origin
Maximum size 512 MB

☒ **Local file**
☐ **Public S3 URL**

Choose file

☐ **No file uploaded**

► **Application code tags**
